The following directions respecting the improvement and cultivation of all kinds of vegetables will be found useful to all gardeners.

1. **Rhubarb.** - Plant rhubarb in the fall, about 4 feet apart. The roots should be set about 6 inches deep, and the tops should be about 1 inch deep. The soil should be rich and well-drained. The plants should be well watered and fed with manure. The harvest should be taken when the leaves are about 6 inches long. The stalks should be cut off at the ground level, and the stems should be trimmed when they are about 1 foot high.

2. **Asparagus.** - Asparagus should be planted in the fall, about 1 foot apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the spring, when the leaves are about 6 inches long. The stalks should be cut off at the ground level, and the stems should be trimmed when they are about 1 foot high.

3. **Potatoes.** - Plant potatoes in the spring, about 1 foot apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The tubers should be dug when they are about 6 inches long. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The tubers should be dug when they are about 6 inches long.

4. **Beets.** - Plant beets in the spring, about 1 foot apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The roots should be dug when they are about 6 inches long.

5. **Carrots.** - Plant carrots in the spring, about 1 foot apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The roots should be dug when they are about 6 inches long.

6. **Radishes.** - Plant radishes in the spring, about 1 inch apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The roots should be dug when they are about 1 inch long.

7. **Turnips.** - Plant turnips in the spring, about 1 foot apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The roots should be dug when they are about 6 inches long.

8. **Horseradish.** - Plant horseradish in the spring, about 1 foot apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The roots should be dug when they are about 6 inches long.

9. **Mustard.** - Plant mustard in the fall, about 1 foot apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The seeds should be sown when they are about 1 inch long.

10. **Sage.** - Plant sage in the fall, about 1 foot apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The seeds should be sown when they are about 1 inch long.

11. **Parsley.** - Plant parsley in the fall, about 1 foot apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The seeds should be sown when they are about 1 inch long.

12. **Chervil.** - Plant chervil in the fall, about 1 foot apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The seeds should be sown when they are about 1 inch long.

13. **Watercress.** - Plant watercress in the fall, about 1 foot apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The seeds should be sown when they are about 1 inch long.

14. **Arugula.** - Plant arugula in the fall, about 1 foot apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The seeds should be sown when they are about 1 inch long.

15. **Chives.** - Plant chives in the fall, about 1 foot apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The seeds should be sown when they are about 1 inch long.

16. **Sorrel.** - Plant sorrel in the fall, about 1 foot apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The seeds should be sown when they are about 1 inch long.

17. **Thyme.** - Plant thyme in the fall, about 1 foot apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The seeds should be sown when they are about 1 inch long.

18. **Parsley.** - Plant parsley in the fall, about 1 foot apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The seeds should be sown when they are about 1 inch long.

19. **Chervil.** - Plant chervil in the fall, about 1 foot apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The seeds should be sown when they are about 1 inch long.

20. **Watercress.** - Plant watercress in the fall, about 1 foot apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The seeds should be sown when they are about 1 inch long.

21. **Arugula.** - Plant arugula in the fall, about 1 foot apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The seeds should be sown when they are about 1 inch long.

22. **Chives.** - Plant chives in the fall, about 1 foot apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The seeds should be sown when they are about 1 inch long.

23. **Sorrel.** - Plant sorrel in the fall, about 1 foot apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The seeds should be sown when they are about 1 inch long.

24. **Thyme.** - Plant thyme in the fall, about 1 foot apart. The soil should be well-worked and well-drained. The plants should be well watered and fed with manure. The harvest should be taken in the fall, when the foliage is yellow and withered. The seeds should be sown when they are about 1 inch long.
